GENERAL

Here is the basic order suggested to diagnose a suspected engine management or fuel injection related problem.

- Check the chart in TROUBLESHOOTING section to have an overview of problems and suggested solutions.
- Check if there is a message displayed by the vehicle information center. If so, use the VCK (Vehicle Communication Kit) and look for fault codes to diagnose the trouble.

NOTE: Fault codes, the letter P — followed by 4 digits (P-1234), can be displayed in the information center for troubleshooting. With safety lanyard on its post, press 5 times the SET button to start the display of P-codes (onboard diagnostic). Press MODE to scroll codes if more than one is present. When the “list” is over, END will appear. When END appears, press MODE to exit.

- Check all fuses.
- Check fuel rail pressure.
- Check spark plugs condition.
- Check fuel pump pressure.
- Check all connections of the wiring harness.
Refer to COMPONENT INSPECTION, REPLACEMENT AND ADJUSTMENT section for procedures.

**Terminology**

Some documents or softwares use technical terms that may be different from the one used in this manual. The following table will help to find the equivalence.

<table>
<thead>
<tr>

## SELF-DIAGNOSTIC MODE

Refer to the following chart. For other problems, refer to COMPONENT INSPECTION, REPLACEMENT AND ADJUSTMENT section.

<table>
<thead>
<tr>
<th>CODED SIGNALS</th>
<th>POSSIBLE CAUSE</th>
<th>REMEDY</th>
</tr>
</thead>
</table>
| 2 short beeps (while installing safety lanyard on post). | • Confirms safety lanyard signal operation.  
• Safety lanyard is recognized by the ECM.  
• Good contact between safety lanyard and DESS post. | Engine can be started. |
| 1 long beep (while installing safety lanyard on post). | • Bad DESS system connection.  
• Wrong safety lanyard.  
• Defective safety lanyard.  
• Dried salt water or dirt in safety lanyard cap.  
• Defective DESS post.  
• Improper operation of ECM or defective wiring harness. | Reinstall safety lanyard cap correctly over post.  
Use a safety lanyard that has been programmed for the watercraft. If it does not work, check safety lanyard condition with B.U.D.S. Replace safety lanyard if reported defective.  
Use another programmed safety lanyard.  
Clean safety lanyard cap to remove salt water.  
Refer to ENGINE MANAGEMENT section.  
Refer to ENGINE MANAGEMENT section. |
| 1 short beep followed by 1 long beep. | • ECM has been set to onboard diagnosis mode. | Remove and reinstall safety lanyard. |
| 4 short beeps every 3 seconds interval for 4 hours. | • Safety lanyard has been left on its post without starting engine or after engine was stopped. | To prevent battery discharge, remove the safety lanyard from its post. |
### CODED SIGNALS

| 2 seconds beep every 1 minute interval. | Watercraft is upside down. | Turn watercraft upright. If it does not work, check the TOPS switch. Refer to ENGINE MANAGEMENT section. |
| | Engine coolant temperature sensor or circuit malfunction. | Refer to ENGINE MANAGEMENT section. |
| | Exhaust temperature sensor or circuit malfunction. | Refer to ENGINE MANAGEMENT section. |
| | Engine oil pressure sensor or circuit malfunction. | Refer to ENGINE MANAGEMENT section. |
| | Out of range pressure in oil separator tank (engine oil leak). | Refer to ENGINE MANAGEMENT section. |
| | TOPS sensor or circuit malfunction. | Refer to ENGINE MANAGEMENT section. |
| | TOPS valve solenoid or circuit malfunction. | Refer to ENGINE MANAGEMENT section. |
| | Starter solenoid circuit malfunction. | Refer to ENGINE MANAGEMENT section. |
| | Communication link fault detected by MPEM. | Refer to ENGINE MANAGEMENT section. |
| | ECM communication link message missing (detected by MPEM). | Refer to ENGINE MANAGEMENT section. |
| | Information center communication link message missing (detected by MPEM). | Refer to ENGINE MANAGEMENT section. |
| | Bilge pump circuit low or high voltage (if so equipped). | Refer to ENGINE MANAGEMENT section. |

| A 2 seconds beep every 5 minutes interval. | Low fuel level. | Refer to INSTRUMENTS AND ACCESSORIES section. |
| | Fuel tank level sensor or circuit malfunction. | Refer to INSTRUMENTS AND ACCESSORIES section. |

| Continuously beeps. | High engine coolant temperature. | Refer to COOLING SYSTEM. |
| | High exhaust temperature. | Refer to COOLING SYSTEM. |

### ENGINE MANAGEMENT SYSTEM FAULT CODES

**General**

The faults registered in the MPEM/ECM are kept when the battery is disconnected.

**IMPORTANT:** After a problem has been solved, ensure to clear the fault(s) in the MPEM/ECM using the VCK. This will properly reset the appropriate counter(s). This will also records that the problem has been fixed in the MPEM/ECM memory. Many fault codes at the same time is likely to be burnt fuse(s).

For more information pertaining to the code faults (state, count, first, etc.) and report, refer to B.U.D.S. online help.

When using the service action suggested in the Fault section of B.U.D.S., the system circuits are referred as 4-23 for instance. It means Amp connector no. 4 and the circuit wire no. 23 as found in the wiring diagram.

When they are referred as A-41, it means connector “A” on the ECM and the —circuit 41.
TPS (Throttle Position Sensor) Faults

Faults which are reported in B.U.D.S. fall into two groups: TPS faults and adaptation faults. These are displayed on the B.U.D.S. system as TPS OUT OF RANGE and TPS ADAPTATION FAILURE.

TPS “OUT OF RANGE” Fault

It is caused by the sensor reading going out of its allowable range. This fault can occur during the whole range of movement of the throttle.

To diagnose this fully, it is recommended to operate the throttle through its full range. It is also recommended to release the throttle quickly as this may also show up a fault that is intermittent.

<table>
<thead>
<tr>
<th>POSSIBLE CAUSES</th>
<th>ACTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Check if connector is disconnected from TPS.</td>
<td>• Fix.</td>
</tr>
<tr>
<td>Check if sensor is loose.</td>
<td>• Fix and reset Closed Throttle and Idle Actuator.</td>
</tr>
<tr>
<td>Inspect sensor for damage or corrosion.</td>
<td>• Replace and reset Closed Throttle and Idle Actuator.</td>
</tr>
<tr>
<td>Inspect wiring (voltage test).</td>
<td>• Repair.</td>
</tr>
<tr>
<td>Inspect wiring and sensor (resistance test).</td>
<td>• If bad wiring, repair.</td>
</tr>
<tr>
<td></td>
<td>• If bad TPS, replace and reset Closed Throttle and Idle Actuator.</td>
</tr>
<tr>
<td>Test sensor operation (wear test).</td>
<td>• Replace and reset Closed Throttle and Idle Actuator.</td>
</tr>
</tbody>
</table>

TPS “ADAPTATION FAILURE” Fault

It is caused by the idle position moving out of an acceptable range.

Following failures can be effected by a TPS “Adaptation Failure”:
- Idle speed is out of range.
- Engine stops, when throttle is released quickly.
- Engine runs inconsistent in low partload or low RPM.

<table>
<thead>
<tr>
<th>POSSIBLE CAUSES</th>

<tr>
<td>Adjustment screw worn or loose.</td>
<td>• Change throttle body.</td>
</tr>
</tbody>
</table>
Supplemental Information for Some Specific Faults

Communication link fault code 1681: Sometimes the information center does not synchronize fast enough for the MPEM. That brings this fault code. Simply clear the fault and try again.

ECM fault codes P0601, P0602, P0604 and P605: These codes may occur in the following situations:
- Electrical noise is picked up by the ECM. Ensure that all connections are in good condition, also grounds (battery, ECM, engine and ignition system), they are clean and well tightened and that all electronic components are genuine – particularly in the ignition system. Installing resistive caps, non-resistive spark plugs or improper knock sensor wiring/routing may lead to generate this fault code.
- Electrical noise might also lead engine to occasional cutout without generating a fault code when engine is restarted. When looking at the fault code, pay attention to the “count” value in the software B.U.D.S. A value between 1 and 9 confirms an electrical noise problem. A value of 10 and above will generate a fault code.
- When installing a new ECM. It is not properly programmed from the factory. The ECM must be returned to be properly “activated”.
- If everything is in good condition, try a new ECM.

Fault code P1202: See detailed information under OSPS in subsection COMPONENT INSPECTION, REPLACEMENT AND ADJUSTMENT.

</tbody>
</table>

**Possible cause:**
Damaged pump, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Check for approximately 1 ohm between pins A and D of the fuel pump connector.
Check for damaged circuit wires.
Check for approximately 1 ohm between pins 1-26 and B-29.
Check for damaged connector, damaged ECM output pins or ECM failure.

| P0261      |                    |                     |      |     | 15          | Flash          | CHK ENG                    | N                                 | Y                                 | N                | Fault is recovered            |

**Possible cause:**
Damaged injector, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Check for 11.4 to 12.6 ohms between engine connector pin 1 and ECM connector pin 15.
Check for 12 volts on pin 2 of injector connector.

| P0262      |                    |                     |      |     | 15          | Flash          | CHK ENG                    | N                                 | Y                                 | N                | Fault is recovered            |

**Possible cause:**
Damaged injector, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Check for 11.4 to 12.6 ohms between engine connector pin 1 and ECM connector pin 15.
Check for 12 volts on pin 2 of injector connector.

| P0264      |                    |                     |      |     | 15          | Flash          | CHK ENG                    | N                                 | Y                                 | N                | Fault is recovered            |

**Possible cause:**
Damaged injector, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Check for 11.4 to 12.6 ohms between engine connector pin 2 and ECM connector pin 33.
Check for 12 volts on pin 2 of injector connector.

| P0265      |                    |                     |      |     | 15          | Flash          | CHK ENG                    | N                                 | Y                                 | N                | Fault is recovered            |

**Possible cause:**
Damaged injector, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Check for 11.4 to 12.6 ohms between engine connector pin 2 and ECM connector pin 33.
Check for 12 volts on pin 2 of injector connector.

**Possible cause:**
Damaged injector, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Check for 11.4 to 12.6 ohms between engine connector pin 3 and ECM connector pin 14.
Check for 12 volts on pin 2 of injector connector.

| P0268      | —                  | Inj. #3 short-circuit to 12 V | 15          | Flash         | CHK ENG                                  | N                                   | Y              | N                               |

**Possible cause:**
Damaged injector, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Check for 11.4 to 12.6 ohms between engine connector pin 3 and ECM connector pin 14.
Check for 12 volts on pin 2 of injector connector.

| P0326      | —                  | Knock sensor out of range     | 15          | Flash         | CHK ENG                                  | N                                   | Y              | N                               |

**Possible cause:**
Damaged sensor, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Bring engine to 5000 RPM. If fault code appears then check for approximately 5 Mohms between system circuits A-9 and A-23.

| P0336      | —                  | Crank position sensor - wrong engine RPM detected | 15          | Flash         | CHK ENG                                  | —                                   | —              | —                               |

**Possible cause:**
Damaged sensor, damaged circuit wires, damaged connector, damaged ECM pins or damaged tooth wheel.

**Service action:**
For the CPS, check for 190 to 290 ohms between terminals A-5 and A-19 of ECM connector. For the CAPS, refer to camshaft position sensor.
Check continuity for circuits A-20, A-34 and terminal 4 on engine connector.

| P0337      | —                  | No CPS signal, but CAPS signal detected | 15          | Flash         | CHK ENG                                  | —                                   | —              | —                               |

**Possible cause:**
Damaged sensor, damaged circuit wires, damaged connector, damaged ECM pins or damaged tooth wheel.

**Service action:**
Check for 190 to 290 ohms between terminals A-5 and A-19 of ECM connector.
Check for 2 volts AC while cranking the engine.

| P0337      | —                  | No CPS signal, but CAPS signal detected | 15          | Flash         | CHK ENG                                  | N                                   | N              | N                               |

**Possible cause:**
Damaged sensor, damaged circuit wires, damaged connector, damaged ECM pins or damaged tooth wheel.

**Service action:**
Check for 190 to 290 ohms between terminals A-5 and A-19 of ECM connector.

**Possible cause:**
Engine leak, oil pump failure, damaged sensor, damaged circuit wires, damaged connector or damaged ECM pins.

**Service action:**
Check resistance at 0 RPM and above 3500 RPM. When blow-by pressure exceeds 40 kPa (6 PSI), the resistance is infinitely high.

| P0544      | —                 | —           | Exhaust gas temperature sensor functional problem | 5 | Flash | CHK ENG | Y | N | Fault is recovered |

**Possible cause:**
Damaged sensor, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Check for approximately 2280 to 2736 ohms at temperature of 19 to 21°C (66 to 70°F) between system circuits A-10 and A-26.

| P0545      | —                 | —           | Exhaust gas temperature sensor shorted to ground | 5 | Flash | CHK ENG | Y/N | Y | N | Fault is recovered |

**Possible cause:**
Damaged sensor, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Check for approximately 2280 to 2736 ohms at temperature of 19 to 21°C (66 to 70°F) between system circuits A-10 and A-26.

| P0546      | —                 | —           | Exhaust gas temperature sensor shorted to 12 V | 5 | Flash | CHK ENG | N | Y | N | Fault is recovered |

|         | —                 | —           | Exhaust gas temperature open circuit | 5 | Flash | CHK ENG | Y/N | Y | N | Fault is recovered |

**Possible cause:**
Damaged sensor, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Check for approximately 2280 to 2736 ohms at temperature of 19 to 21°C (66 to 70°F) between system circuits A-10 and A-26.

| P0562      | —                 | —           | Battery voltage too low | 15 | Flash | N/A | N | Y | N | Fault is recovered |

**Possible cause:**
Battery failure, rectifier failure, damaged circuit wires, battery terminal connection, damaged AC generator or damaged connectors.

**Service action:**
Check fuses.
Check system circuits 1-25 to positive (+) battery terminal.
Check system circuits 1-24 to negative (-) battery terminal.

</table>

**Possible cause:**
No initialisation after throttle body or ECM replacement or throttle idle stop drifted.

**Service action:**
- Check cable adjustment.
- Check idle stop for wear.
- Make sure that the throttle plate is against the throttle stop.
- Check throttle angle at idle.
- Reset closed TPS.

| P1148      | MPEM                | 15          | Off           | CHK ENG                       | —                                      | —                                | —              | —                                |

**Possible cause:**
Idle bypass valve wrong reference, TPS adaptation failure, TPS failure or battery voltage out of range.

**Service action:**
- Key on and off.
- Reset closed TPS.
- Check battery voltage. Replace TPS.
- Replace idle bypass valve.

| P1200      | MPEM                | 5           | Flash         | CHK ENG                       | Y/N                                    | Y                                | 5000           | Fault is recovered               |

**Possible cause:**
Blow-by valve failure, damaged circuit wires, damaged connector, damaged ECM pins or ECM failure.

**Service action:**
- Check for 1.27 to 2.47 ohms on component.

| P1201      | MPEM                | 5           | Flash         | CHK ENG                       | N                                      | N                                | N              | N/A                              |

**Possible cause:**
Blow-by valve failure, damaged circuit wires, damaged connector, damaged ECM pins or ECM failure.

**Service action:**
- Check for 1.27 to 2.47 ohms on component.

| P1202      | MPEM                | 5           | Flash         | CHK ENG                       | N                                      | N                                | N              | N/A                              |

**Possible cause:**
Damaged oil pressure switch, blow-by valve failure, damaged circuit wires, damaged connector or damaged ECM pins.

**Service action:**
- Check for 1.27 to 2.47 ohms between terminals.
- Check if TOPS is connected to wiring harness.
- Check resistance at 0 RPM and above 3500 RPM. At high RPM the resistance should be close to 0 ohm.
- Check for 12 volts on pin 1 of the blow-by-value.

**Possible cause:**
Intake pressure sensor or TPS failure.
Sensors power line shorted to ground or to battery.
Damaged ECM.

**Service action:**
Key on and off.
Reset closed TPS.
Check battery voltage.
Replace TPS.
Replace idle bypass valve.

**Possible cause:**
Damaged safety switch, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Remove DESS key and check for an open circuit on system circuit B-38.

**Possible cause:**
Damaged safety switch, damaged circuit wires, damaged connector or damaged ECM output pins.

**Service action:**
Remove DESS key and check for an open circuit on system circuit B-38.

**Possible cause:**
Damaged bilge pump, damaged circuit wires, damaged connector or damaged MPEM output pins.

**Service action:**
Check system circuits 2-20 and 2-3.
Connect or disable bilge pump in setting page.

**Possible cause:**
Damaged bilge pump, damaged circuit wires, damaged connector or damaged MPEM output pins.

**Service action:**
Check system circuits 2-20 and 2-3.

**Possible cause:**
Damaged connector or damaged MPEM output pins.

**Service action:**
Check system circuit 1-20.

</tbody>
</table>

Possible cause:
Damaged circuit wires, damaged connector, damaged MPEM output pins. ECM not connected.

Service action:
- Check system circuits 2-10 and 2-11.
- Check for 12 volts between system circuit A-11 and ground.
- Check 5A fuses.
- Check connection.

| P1683      | —                  | COM RAM Fault      | 15   | Flash | N/A         | —              | —                              | —                                    | —                             | —              |                                |

Possible cause:
Damaged ECM.

Service action:
No service action available for fault P1683, symptom B8.

| P1690      | —                  | VTS control up circuit open circuit or shorted to ground | —    | 15   | Off         | N/A            | Y                              | Y                                    | N                              | N/A            |                                |

Possible cause:
Damaged VTS, damaged circuit wires, damaged connector or damaged MPEM output pins.

Service action:
Check for 12 volts between system circuits 2-7 and 2-1 when VTS UP is activated.

| P1691      | —                  | VTS control up circuit shorted to battery               | —    | 15   | Off         | N/A            | Y                              | Y                                    | N                              | N/A            |                                |

Possible cause:
Damaged VTS, damaged circuit wires, damaged connector or damaged MPEM output pins.

Service action:
Check for 12 volts between system circuits 2-7 and 2-1 when VTS UP is activated.

| P1692      | —                  | VTS control down circuit open circuit or shorted to ground | —    | 15   | Off         | N/A            | y                              | y                                    | N                              | N/A            |                                |

Possible cause:
Damaged VTS, damaged circuit wires, damaged connector or damaged MPEM output pins.

Service action:
Check for 12 volts between system circuits 2-6 and 2-1 when VTS DOWN is activated.

| P1693      | —                  | VTS control down circuit shorted to battery             | —    | 15   | Off         | N/A            | y                              | y                                    | N                              | N/A            |                                |

Possible cause:
Damaged VTS, damaged circuit wires, damaged connector or damaged MPEM output pins.

Service action:
Check for 12 volts between system circuits 2-6 and 2-1 when VTS DOWN is activated.
